

EVOLVE large-format paper

At last a brilliant white, 100% recycled large-format paper ... perfect for Inkjet and PPC applications.

EVOLVE is made from 100% recovered waste paper, recycled into pulp, and then made into bright white paper, with no compromise on quality or performance!

EVOLVE LARGE-FORMAT PAPER:

- 100% recycled paper for Inkjet & PPC applications that is a timely alternative for companies committed to reducing, re-using and recycling
- brilliant white and super smooth

---|EVOLVE ENVIRONMENTAL BENEFITS:|---

- + diverts up to 180,000 tonnes of waste paper from UK landfills every year
- + reduces environmental impact of paper use
- + re-uses and recycles water - saves energy
- + made in the UK in an ISO14001 accredited mill

FREQUENTLY ASKED QUESTIONS:

 **Why should I choose to use EVOLVE instead of my existing paper?** - EVOLVE large-format paper offers comparable performance and quality to that of virgin papers, yet with all the environmental benefits that its unique recycling and production process provides.

 **Recycled paper can sometimes be dull and grey, how bright is Evolve?** - Here's the difference! EVOLVE is as bright and white as conventional paper. This brightness and whiteness is achieved through an environmentally friendly and unique production process of multi-stage cleansing that uses only biodegradable cleaners that brighten the paper yet are much kinder to the environment than traditional processes.

 **Recycled papers usually feel rough, how is EVOLVE different?** - EVOLVE is very smooth and compares favourably with conventional papers.

EVOLVE's high smoothness presents an excellent surface for Inkjet (*black and colour*) inks, it also significantly reduces the tendency for the paper to curl ... which is of specific relevance to PPC applications.

Is EVOLVE suitable for archiving purposes?

Yes. EVOLVE is accredited with DIN6738, an international standard that guarantees paper for archiving.

Some say that it takes more energy to make recycled paper than it does to make conventional paper, is that true? - Nope, not true; in fact it takes approximately half the amount of energy to produce paper made from recovered fibre versus paper made from wood pulp.

 **How is EVOLVE's unique production process kinder to the environment?** - EVOLVE's production process is kinder to the environment in four principal areas: it helps in reducing waste in the environment; it saves energy; it conserves water by re-using and recycling at every stage of the production process, and importantly, it cleans, treats and oxygenates the water before pumping it back into the rivers.

 **What environmental standards are in place at the mill where EVOLVE is produced?** - EVOLVE is produced at a mill accredited with ISO14001 which is the internationally recognised standard for environmental responsibility and management. The mill is also accredited with EMAS, the Eco-Management and Audit Scheme. In the production of all paper produced by the mill, it is furthermore bound by CoC (*Chain of Custody*) which requires cooperation with Forest Management Schemes such as FSC or PEFC controlling and tracing the flow of raw material from managed forests.

EVOLVE INKJET

100% Recycled Inkjet Paper / 80gsm & 90gsm

INKJET DESCRIPTION:

Bright white, super smooth, 100% recycled paper for INKJET applications. This medium weight uncoated paper is as good as if not better than conventional paper, and a timely alternative for companies that have committed to an environmental charter to reduce, re-use and recycle.

APPLICATIONS:

- CAD work • presentation • GIS/mapping

ROLL SPECIFICATIONS:

WEIGHT: 80gsm, 90gsm

LENGTH: 45m and 90m CORE: 52mm

WIDTHS: 610mm, 841mm, 914mm

EVOLVE PPC

100% Recycled Plain Paper Copier / 80gsm

PPC DESCRIPTION:

A high grade, bright white 100% recycled paper that is perfect for PLAIN PAPER COPIER applications. Superb quality with no compromise on brightness and smoothness. Clearly a 'no risk solution' and a sound choice for organisations seeking an eco-friendly alternative that is as good as it gets.

APPLICATIONS:

- multiple-use copying • plan printing

ROLL SPECIFICATIONS:

WEIGHT: 80gsm

LENGTH: 150m CORE: 76mm

WIDTHS: 594mm, 841mm

AVAILABLE AS CUT SHEETS:

A0	1189mm x 841mm	pack quantity 125 sheets
A1	841mm x 594mm	pack quantity 250 sheets

SUMMARY

100% recycled with no compromise on quality!
So if you think you know what to expect from recycled paper ... think again!

Whiteness:

Bright white for perfect print results. This is a 100% recycled paper with a difference ... not grainy, dull and grey, but rather an ultra-white stock that performs as well as conventional papers.

Print Quality:

A confident and reliable performer with guaranteed outstanding sharpness and consistency.

Smoothness:

Recycled ... but not as you know it. EVOLVE is super smooth for great performance and print results, significantly reducing curl in PPC applications and a perfect surface for Inkjet (black & colour) inks.

Longevity:

EVOLVE is accredited with DIN6738 making it ideal for archiving purposes.

Runability:

The EVOLVE range is dust-free and consistent. No jamming or stoppages with EVOLVE.

Environmental Benefits:

- + 100% recycled paper - made in the UK
- + making paper from recovered fibre uses less energy than paper made from wood pulp
- + helps reduce waste in the environment by diverting 180,000 tonnes of waste from UK landfills per year
- + conserves water by re-using and recycling at every stage of the production process
- + uses only biodegradable cleaners and chlorine-free bleaches to whiten the paper
- + water used in the production process is cleaned, treated and oxygenated before being pumped back into the river ... *"the water pumped back into the River Swale is considered to be more life sustaining than the existing river water"*
